PROFESSIONAL SUMMARY

Java Backend Developer with 1.8 years of experience at Tata Consultancy Services developing and supporting backend applications. Skilled in Java, Spring Boot, Spring Data JPA, Hibernate, Spring Security, JWT, REST APIs, PostgreSQL and Oracle, covering API design, database access, unit testing with JUnit and Mockito, and production debugging on a large-scale Oracle Retail RMS system. Strong foundation in Core Java, OOP, Collections, Multithreading and SQL.

TECHNICAL SKILLS

Languages: Java, SQL, PL/SQL, JavaScript

Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Spring Security, JWT, Spring AI

Web Services: REST APIs, Swagger/OpenAPI, Bean Validation

Databases: PostgreSQL, Oracle, MySQL, Redis

Testing: JUnit 5, Mockito

Tools & DevOps: Git, GitHub Actions (CI/CD), Maven, Docker, Postman, VS Code

Core Concepts: OOP, Collections, Multithreading and Concurrency, Design Patterns, Microservices, Data Structures and Algorithms

WORK EXPERIENCE

Assistant System Engineer, Tata Consultancy Services, Pune

Feb 2025 - Present

- Developed RESTful APIs in Java and Spring Boot using a layered controller-service-repository architecture with input validation and centralized business logic.
- Implemented data access with Spring Data JPA and Hibernate on PostgreSQL and Oracle; wrote and tuned SQL and PL/SQL queries for correctness and performance.
- Wrote unit tests with JUnit 5 and Mockito and implemented global exception handling to catch edge cases and reduce defects before deployment.
- Debugged backend and integration failures in a large-scale Oracle Retail RMS system by tracing application logs and writing targeted SQL/PL-SQL queries to find root causes.
- Resolved production transaction and integration issues within SLA, working with backend and database teams.
- Used Git for version control, Maven for builds and Postman for API testing across the development cycle.

PROJECTS

Ticket Management System | GitHub

Tech Stack: Java, Spring Boot, Spring Security, JWT, Spring Data JPA, Hibernate, PostgreSQL, Maven, Swagger/OpenAPI, JUnit 5, Mockito

- Built RESTful APIs for end-to-end ticket management, including creation, updates, status tracking, pagination, dynamic sorting and multi-field filtering using JPA Specifications.
- Secured the APIs with Spring Security and JWT authentication: user registration, BCrypt password hashing, login, token validation and protected endpoints.
- Implemented priority-based email notifications with Spring Mail that alert only on P1/P2 tickets and skip lower-priority tickets.
- Used DTOs, Bean Validation, global exception handling and Swagger/OpenAPI docs; covered service and auth logic with JUnit 5 and Mockito tests.

AI-Powered Learning and Assessment Platform | GitHub

Tech Stack: Java, Spring Boot, Spring AI, Ollama (LLM), PostgreSQL, REST APIs

- Built a backend that generates topic-specific questions and assessments using a locally hosted LLM through Spring AI and Ollama.
- Generated explanations and personalized feedback from each user's answers.
- Developed REST APIs with Spring Boot and PostgreSQL to manage users, topics, questions, assessments and results.
- Implemented performance analysis that identifies weak topics and recommends what to study next.

EDUCATION

B.E. Computer Engineering, Smt. Kashibai Navale College of Engineering, Pune | CGPA: 8.31

2020 - 2024
